High Performance Milling:

PCBN ball track mills

for the hard machining of CV joints

Hard machining

High Performance Milling with Guhring PCBN ball track mills

The perfect solution for the hard machining of joints

Ensure highest quality, highly efficient machining with short machining times as well as cost-efficient tooling for the hard machining of ball joints in CV joints. The new PCBN ball track mills from Guhring offer you a made-to-measure tooling solution for highest cutting rates and tool life.

The Guhring PCBN ball track mills are convincing thanks to their high rigidity and stability. They, therefore, offer maximum process reliability and at the same time provide consistently high quality and accuracy for the highly stressed joints.

Soft machining

Solid carbide or carbide tipped ball track mills

Soft machining with made-to-measure tool solutions

Also for the soft machining of CV joints you can ensure highly efficient machining with short machining times and cost-efficient tooling for your production using Guhring ball track mills. Guhring ball track mills for soft machining are available as 2-, 3- or 4-fluted tools made from solid carbide or with carbide tipped steel body. You just have to choose the best solution for your application!

GUHRING
